

Problem 1. Random people carousel, swipe right to add in favourite list and available offline.

Acceptance criteria:

1. Create a tinder like carousel to swipe left and right random people.
2. Every card in the app, has the details of person with person's image on top and icons on bottom, name and other info from the [api](#).
3. The card should look like the following:

4. If I swipe left I get the details of the next person from the API.
5. At the bottom there are multiple icons on touch the information changes.
6. The user whom I swiped right should be stored as favourite.
7. My favourite list of people should be **available offline** also.
